Zylindrische Federn

Die „klassische Schraubenfeder“ besitzt eine zentrische Mittellinie. Sie wird oft in Systemen mit Doppelquerlenkern verbaut. Durch unterschiedliche Windungsabstände lässt sich eine progressive Federkennlinie erzielen.

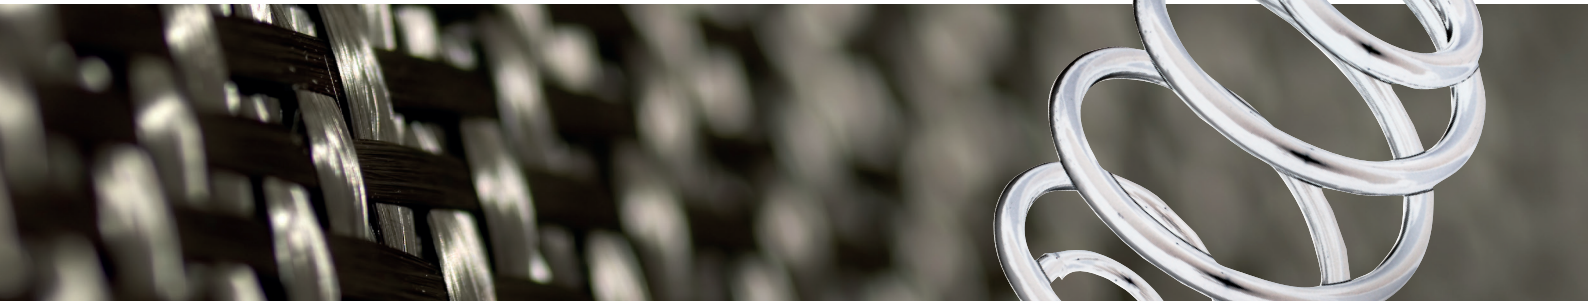

Miniblock – Federn

Um bestimmte fahrdynamische Eigenschaften zu erreichen, ist eine progressive Federkennlinie hilfreich. Als besonders platzsparende Varianten eignen sich hier besonders Miniblock – Federn aus konischen Drähten mit sich verjüngenden Querschnitten. Auf Grund der geringeren Lebenserwartung sowie hoher Reklamationsquoten verbauen viele Automobilhersteller diese Federn daher nicht mehr in neuen Modellgenerationen.

Miniblock – Federn optimiert

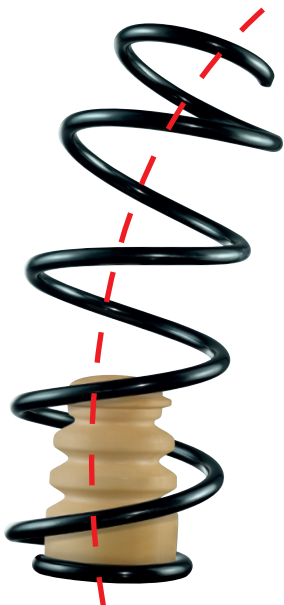

Wir haben optimierte Miniblock – Federn entwickelt, die aus zylindrischen Federstählen gefertigt werden. Ergebnis ist eine um das dreifach längere Lebensdauer. Diese Federn unterscheiden sich optisch von den werkseitig verbauten Miniblock – Federn (Form, Bauhöhe, Drahtstärke, Anzahl der Windungen, usw.). Diese Abweichungen beeinflussen aber weder die Funktion der Feder noch den Höhenstand des Autos.

Side Load-Federn (Bananenfedern)

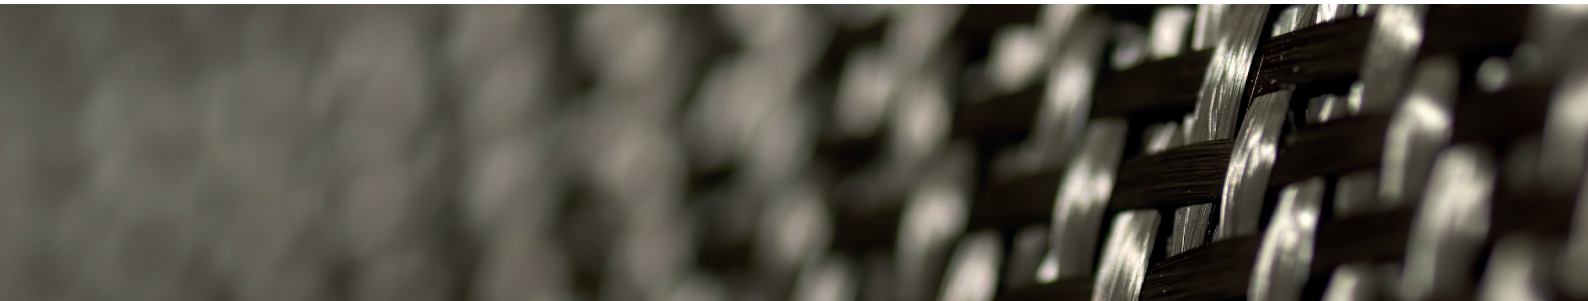

Zur Kompensierung von Querkräften werden bei McPherson-Federbeinen oft Side-Load-Federn verwendet.

Im unbelasteten Zustand verläuft die Wirkungslinie schräg zur Dämpferachse. Einwirkende Seitenkräfte werden so verringert.

C-Federn

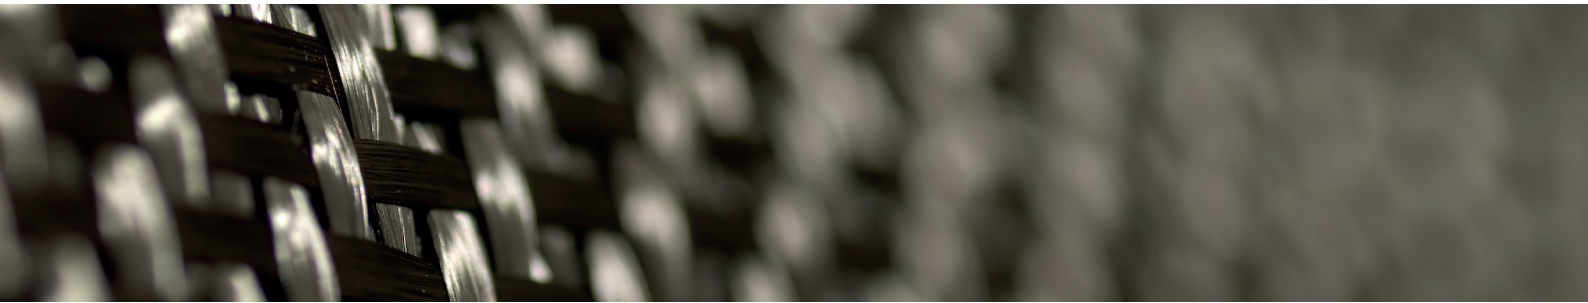

Werden auf Hinterachsen verbaut, die auf einem Kreisbogen einfedern können. Dabei wird der Bauraum spannungs-optimiert ausgenutzt. Diese Federn werden meist in Kombination mit Elastopuffern verbaut und bieten so eine progressive Kennlinie.

Federbrüche

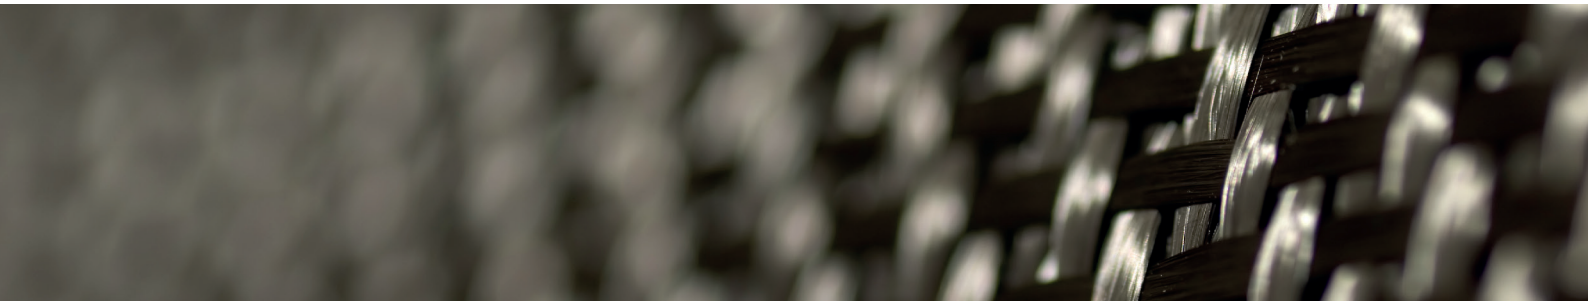

Schraubenfedern bilden das Herz des Fahrwerks. Sie gehören zu den am höchsten schwingungsbelasteten Bauteilen im Auto. Hohe Schwingungszahlen lassen die Federn im Laufe der Jahre altern und ermüden. Es entsteht der sogenannte Dauerbruch (Ermüdungsbruch). Im Winter verlieren die Federn zudem an Elastizität und Spannkraft. Überbeanspruchungen führen dann schnell zum Federbruch. Nach wie vor werden Federbrüche aber überwiegend durch Korrosion hervorgerufen. Mechanische Verletzungen (Steinschlag) und Streusalz führen unweigerlich zu Korrosion und Federbruch.

Da die Feder meist in der oberen Windung – oft im Federteller – bricht, wird der Bruch erst beim Tausch der Stoßdämpfer, beim Reifenwechsel oder bei der nächsten TÜV-Untersuchung bemerkt.

Fahrwerksfedern

Schraubenfedern

*Produziert für die höchsten Qualitätsanforderungen
in der Automobilindustrie*

Produktion

Wir produzieren unsere Federn unter Berücksichtigung modernster Fertigungstechnologien auf neusten CNC-Wickelautomaten. Infrarotgesteuerte Wärmebehandlungseinrichtungen, CNC-Schleifmaschinen und vollautomatische CNC-Fas- und Warmsetzautomaten, sowie modernste Korrosionsschutztechnologien garantieren eine Spitzenqualität.

Federstähle

Für unsere Federn verwenden wir ausschließlich hochwertige Chrom-Silizium-, oder Chrom-Vanadium-Federstähle mit Zugfestigkeiten von bis zu 2.100 MPa.

Kugelstrahlen (Verfahren zur Oberflächenverfestigung)

Thermo-Spannungsstrahlen verlängert die Lebensdauer unserer Federn nochmals deutlich im Vergleich zu herkömmlich kugelgestrahlten Federn.

Oberflächenbeschichtung

Herkömmliche Verfahren der Lackier- und Pulverbeschichtung erfüllen nicht mehr unsere gesteigerten Anforderungen. Auf unserer hochmodernen Beschichtungsstraße werden unsere Federn zinkphosphatiert und pulverbeschichtet (Epoxidharz). Ein 480 Stunden Salzsprühtest gemäß DIN 50021 SS ist für unsere Federn keine Herausforderung.

Verpackung

Alle Federn sind mit Teile-Nummern gekennzeichnet und werden einzeln in hochwertigen Kartons mit mehrfarbigem Firmenlogo verpackt. Die Etiketten werden zusätzlich mit individuellen Barcodes versehen.

Lieferungen

Außergewöhnlich kurze Lieferzeiten und eine Lieferquote von über 95 % verbessern die Lieferfähigkeit unserer Kunden und senken ihre Lagerkosten.

Garantie

CS-Germany steht für Produkte in höchster Qualität. Wir gewähren 10 Jahre Garantie auf alle CS-Germany Qualitätsfedern.

Sonstiges

Die automatisierte Produktion auf modernsten Fertigungsmaschinen garantiert eine Spitzenqualität – unser Kostenmanagement ein unerreichtes Preis-/Leistungsverhältnis.

The advertisement is a vertical rectangular graphic. At the top, there is a logo consisting of a stylized 'CS' with a horizontal bar through it, colored with the German flag's stripes (black, red, and gold), followed by the word 'Germany' in a sans-serif font. Below the logo is a close-up photograph of a woman's face, focusing on her eyes which are a striking golden-yellow color. The bottom half of the graphic has a black background. On the left, there is a white line-art illustration of a coiled spring. To the right of the spring, the text 'Watch out for quality!' is written in a large, white, sans-serif font. Below this, the text '10 Jahre Garantie' is written in a smaller, white, sans-serif font, angled upwards. At the very bottom right, the website address 'www.coil-springs.de' is written in a small, white, sans-serif font.

Allgemeine Informationen

Für Sportfahrwerke, Niveauregulierungen, Fahrzeuge im Taxi-betrieb, etc. sind die Federn nur dann zu verwenden, sofern dieses ausdrücklich erwähnt ist.

Bitte Federn nur paarweise tauschen, da ansonsten für den Höhenstand des Fahrzeuges keine Garantie übernommen werden kann.

Für einige Fahrzeugmodelle produzieren wir sowohl Standard-, als auch verstärkte Federn. Sollte das Fahrzeug unter erschwerten Bedingungen eingesetzt werden oder mit Zusatzaggregaten ausgerüstet sein, die das Leergewicht beeinflussen, empfehlen wir den Einbau unserer verstärkten Federn.

Technische Weiterentwicklungen und Materialverbesserungen können dazu führen, dass unsere Federn in Form, Bauhöhe, Drahtstärke und Windungsanzahl von den werksseitig verbauten Federn abweichen. Federeigenschaften und Höhenstand des Fahrzeugs werden dadurch nicht beeinflusst.

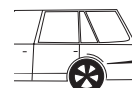

CS Germany liefert alle Federn einzeln verpackt in hochwertigen Kartons mit Firmenlogo.

Weitere Zertifikate finden Sie auf unserer Homepage
